

Increasing Memory Size

If you are unable to see the hierarchical tree view in the left pane of the Ontology browser, you may need to modify memory allocation to the JRE. In order to increase the memory size, please follow these steps:

1. Open the **control panel** from the local directory.
2. Double click the **Java** folder.
3. Select **Java** from **Java Control Panel** menu bar.
4. Two subpanels: **Java Applet Runtime Settings** and **Java Application Runtime Settings** can be seen.
5. Press **View...** for the **Java Runtime Settings** for applets.
6. Set the Java Parameter Settings with the following extension **-Xmx96M** (or **-Xmx128M** for **Macintosh OS**).
7. Click **Apply**.

For more information please refer to this link: <http://java.sun.com/j2se/1.5.0/docs/guide/deployment/deployment-guide/jcp.html>

Insert extension
-Xmx96M Or
-Xmx128M
